

Applied Technology Services

**Reducing Waste, Ensuring Safety
and Improving Efficiency**

At Cyanco, exceptional service means truly partnering with our customers to understand your highest priorities and most pressing challenges. Our Applied Technology team, staffed with chemists, metallurgists and Environment, Health, Safety & Security (EHSS) experts, is on hand to help you along every step of your journey – from pre-feasibility analysis all the way through production.

- » Cyanco's **Laboratory Services** has been involved with ore processing test work for over 30 years and implementing world-class processes at mine sites globally.
- » Cyanco's **Detoxification Services** help determine the best detoxification technologies that will comply with environmental permit standards and can be constructed and operated for the lowest cost.
- » The Cyanco **Community Relations** service helps mines establish community awareness and build good community relations.
- » As part of our commitment to the safe handling and use of sodium cyanide, Cyanco's **Cyanide Assessment Package** helps customers track data related to their on-site use and application of NaCN.
- » Cyanco offers its **ICMC Gap Analysis** service to proactively assist customers with obtaining and maintaining their International Cyanide Management Code (ICMC) certification. This ensures the highest safety standards for mine employees, their communities and the environment.

CUSTOMER BENEFITS

Minimize hazardous waste

Put best practices in place for employee safety

Reduce costs of labor, operating expenses and detoxification costs

Spend less on CapEx for equipment

Stay on production schedule

Put local communities at ease
